Acute Dose Effects
A: General Product Information

INHALATION:
Acute exposure: May cause irritation to the mucous membranes and upper respiratory tract. Symptoms may include coughing, and sneezing. May cause central nervous system effects with headache, dizziness, drowsiness, and loss of coordination.

SKIN CONTACT:
Acute exposure: Skin contact may cause sensitization and allergic reaction in sensitive individuals. Symptoms can include itching, welts and redness. Prolonged contact with the skin may cause dermatitis, with symptoms of inflammation and reddening of the skin. The Diisodecyl Phthalate component can be absorbed via intact skin and may cause central nervous system depression if a large area of the skin is involved.

EYE CONTACT:
Acute exposure: Contact with the eyes may cause mild irritation, pain, reddening, and watering

INGESTION:
Acute exposure: Ingestion is not anticipated to be a likely route of exposure to this product. If large quantities of this product are swallowed, irritation of the mouth, throat, esophagus, and other tissues of the digestive system may occur. Symptoms may include stomach pains and vomiting.
